

I am an over the road truck driver, and a XM subscriber. I find that XM is with out a doubt the best thing that has happened to the radio industry ever. with the local traffic and weather I can plan to avoid traffic congestion and know what the weather is before I hit the city limits, also it allows me to keep track of my home area from anywhere in the country. If local terestral radio radio was all the public wanted there would be no need for XM but I want more and XM delivers. Don't take my freedom of information away because regular radio is inferior and XM is the onle way I have to keep up with this kind of information. I am a subscriber and I pay every month for the right to get what I want to listen to I can listen to AM and FM for free but they don't offer every thing I want to hear. How many years have radio stations had to play what people want and can't get it right? XM has listened and got it right, now alow them to do what only they do best!
